

Sourav Shaw

Associate 2 | GenAI & Agentic AI Developer

📍 Kolkata, India | 📞 +91 9123863695 | ✉️ Souravshaw131@gmail.com

Professional Summary

GenAI and Power Platform Developer with 5 years of experience in building enterprise applications, intelligent automation solutions, and AI-powered systems using Python, Azure AI Services, Microsoft Power Platform, and Generative AI frameworks. Skilled in LangChain, LangGraph, Microsoft Copilot Studio, vector search, prompt engineering, REST APIs, and scalable AI workflow automation.

Experienced in developing Agentic AI solutions, enterprise automation platforms, and intelligent retrieval systems using LLMs, Azure Cognitive Search, PostgreSQL, and Redis. Strong understanding of AI workflows, SDLC, troubleshooting, stakeholder communication, and production support.

Technical Skills

Core Skills

- Python, SQL, PostgreSQL, Core Java
 - LangChain, LangGraph
 - Microsoft Copilot Studio, Power Apps, Power Automate
 - Azure AI Services, Azure Cognitive Search
 - RAG, Vector Databases
 - REST APIs
 - LLM Applications
 - HTML, CSS, Web Application Development
 - Redis, Pydantic, Langfuse
 - SDLC, Troubleshooting, Production Support
-

Professional Experience

PricewaterhouseCoopers Service Delivery Center (PwC)

Associate 2 – GenAI & Power Platform Developer

June 2021 – Present | Kolkata, India

Working on enterprise AI solutions, automation platforms, and Agentic AI applications for global clients.

Key Projects

Incentives Explorer – Agentic AI Platform

Developed and maintained an intelligent Agentic AI platform using LangGraph and LLMs to automate discovery, analysis, and reporting of tax incentives, grants, and credits for enterprise clients.

Key Contributions:

- Implemented parallel retrieval pipelines integrating Azure Cognitive Search and PostgreSQL using vector-based semantic search and dynamic SQL query generation. Worked on scalable GenAI systems using prompt engineering, vector indexing, and enterprise AI workflows.
- Developed a 5-tier query cascade mechanism with intelligent deduplication and progressive filter relaxation for optimal result retrieval
- Built LLM-powered SQL parameter extraction using structured output validation with Pydantic schemas
- Developed session-aware conversational AI workflows using Redis for context preservation across user interactions
- Implemented AI-driven document generation and incentive summarization workflows
- Created scalable and maintainable GenAI architecture for enterprise use cases
- Supported ongoing enhancements, troubleshooting, and production issue resolution
- Collaborated with stakeholders to improve user experience and optimize AI responses

Technologies Used:

Python, LangGraph, LangChain, PostgreSQL, Azure Cognitive Search, Redis, Pandas, Pydantic, Langfuse, REST APIs

Business Impact:

- Reduced manual incentive research effort from hours to minutes
- Managed and processed 10K+ incentive programs with intelligent AI filtering
- Improved operational efficiency through automation and AI-assisted workflows

Microsoft Copilot Studio – AI Assistant Development

Developed AI assistant solutions using Microsoft Copilot Studio integrated with enterprise workflows and GenAI capabilities.

Key Contributions:

- Built conversational AI and automation workflows
- Integrated AI capabilities with enterprise applications and APIs
- Supported prompt-based AI interactions and scalable AI solutions
- Worked on enterprise AI assistants and workflow automation use cases
- Collaborated with stakeholders to improve AI-driven user experiences

Technologies Used:

Microsoft Copilot Studio, Power Platform, Azure AI Services, Python

Oracle SQL Report Generator

Developed an AI-powered application to generate Oracle SQL queries from Functional Specification Documents.

Key Contributions:

- Automated SQL generation using AI workflows
- Reduced manual development effort and improved productivity

Technologies Used:

Python, APIs, SQL

Multiple Keyword Page Extraction Solution

Developed a document search and extraction solution to identify keyword-specific pages from PDF and ZIP files.

Key Contributions:

- Built search-based extraction workflows
- Improved document processing speed and efficiency

Technologies Used:

Python, PDF Processing

Flexible Report Generator

Built a dynamic reporting platform for generating customized documents using reusable templates.

Technologies Used:

Power Apps, Power Automate, APIs

While You Work – Workflow Automation Platform

Developed a role-based Power App supporting automated review and approval workflows.

Technologies Used:

Power Apps, Power Automate, Dataverse

Additional Enterprise Applications

- Interview Tracker – Centralized interview management platform with automated email notifications
 - Jump Start – Multi-page Power App converting structured client data into consolidated PDF documents
 - Exchange Rate Calculator – API-driven currency conversion application with real-time exchange rates
 - Report Template Management – Converted Power App templates into Word documents using .NET-based APIs
-

Education

Bachelor of Technology (B.Tech)

BP Poddar Institute of Management & Technology, Kolkata
Graduated: 2020

Courses & Certifications

- Power Platform App Maker Associate (PL-100) – Microsoft
 - Power Platform Developer Associate (PL-400) – Microsoft
 - Power Platform Solution Architect Expert (PL-600) – Microsoft
 - Azure Fundamentals (AZ-900) – Microsoft
 - Azure AI Fundamentals (AI-900) – Microsoft
 - Azure Developer Associate (AZ-204) – Microsoft
-
